

VA/DoD Clinical Practice Guideline for the Management of Uncomplicated Pregnancy – Key Points Card

Change in the traditional interval-based visit template to a system with specific gestational age visits, each having a specific well-defined goal and objectives.

- Standardized prenatal care for lower risk patients to minimize variation.
- Standardized care plan to improve overall patient satisfaction with prenatal care.
- Explicit, evidence-based interventions for screening and management.
- Standardized education of patients and providers.
- Standardized counseling for antenatal diagnostic screening
- Standardized prenatal screen to identify women with high-risk pregnancies.
- Accompanying tool kit to empower implementation.
